Stoffenmanager® **SHARE**

Stoffenmanager® SHARE

Make your Workplace Instruction Cards (WICs) and Safety Data Sheets (SDS) easily available to all your colleagues in the company. WICs are used to inform staff about the risks of working with (hazardous) substances. These are distributed to colleagues by hanging a printed version in the workplace or sharing them on the intranet. But what about the new products and changes in the product composition or work situation that occur regularly? This means that the WIC also needs to be updated and redistributed. A time-consuming, costly activity!

The Stoffenmanager® SHARE module makes this a thing of the past. You can easily share your WICs as well as your SDSs with everyone involved in the organisation. All you need is a browser and access to the internet. If you change something in Stoffenmanager®, the WIC in the Share module is immediately adjusted, and this most recent version of your WIC is now directly available for your colleagues. This ensures that everyone always works with the latest WICs and SDSs. Which improves the safety in the workplace!

What can you do with the SHARE module?
As an administrator, you determine whether a WIC is shared, with whom and which locations. Colleagues can use the SHARE link to view or print the WICs and/or SDSs. You can also secure the WIC with a password, so only specific selected users are able to access the WIC. The SHARE module also allows you to make a WIC temporarily available, for example, when maintenance is ongoing. In addition, you can share SDSs with customers outside your company. Your customer can then access the data via an XML download and upload it directly to their own Stoffenmanager® account.

Who can use it?
Everyone with internet access, a device, and access to the SHARE link (and the password) can view the WICs and SDSs. Stoffenmanager® SHARE is also for mobile use. This is convenient when your colleagues work in the field or not always working at a fixed location. It is also possible to generate a deeplink so that your colleagues can access the RIE WICs via your own document sharing system. Would your colleagues rather read the WIC in English? Make your WICs available in several languages so colleagues can choose their preferred reading language.

What are the benefits of working with Stoffenmanager® SHARE?

Efficiency! Not every change needs to be implemented separately in the WIC or SDS. This is less error-prone because one click makes the last update available to everyone in real time. Of course, you can still print out the WICs, but the most important benefit is that you and your colleagues always have the most up-to-date information. This also applies to colleagues who work at other locations. The foundation for proper instruction and safe working with (hazardous) substances!

Safety and security

To use Stoffenmanager® SHARE, you generate a URL in Stoffenmanager®. It consists of 64 random characters, which makes it difficult to fake. You can also choose to increase the security of access to the URL by giving it an password.

WIC labels

You can create WIC labels with the SHARE module. These labels come in four formats (XS, S, M, and L). The labels are useful, for example, when you perform analyses in a laboratory or when you use small quantities of a product from bulk storage. All WIC labels list essential information and have a QR code. Scanning this code with your mobile takes you directly to the entire WIC.

More information

The Stoffenmanager® SHARE module costs **€ 1.256** annually **(excl. VAT)**. This price includes an unlimited number of users who can access the WICs in the SHARE module. Meaning you can share the WICs with as many colleagues as you prefer!

Want to try Stoffenmanager® SHARE first? You sure can!
